**Interloci's Network Management Appliance Named to  
"2003 Products of the Year" by TechTarget's  
SearchNetworking.com**

**NetworksAOK product wins Network Performance Management  
Software category Bronze Award for functionality, value, ease-of-use**

Greenwich, CT, February 1, 2004 — NetworksAOK, the versatile, rack mounted appliance that performs critical network monitoring, intrusion detection and trouble ticketing functions, has earned the Bronze award in SearchNetworking.com's Product of the Year competition in the Network Performance Management Software category. A panel of industry experts – including the editors of TechTarget's SearchNetworking.com, a select group of users and independent industry analysts, with input from SearchNetworking.com members -- reviewed numerous products and selected winners based on a variety of criteria, including innovation, ease-of-use, performance and value. The editors said that IT pros should consider placing the selected products on their "A" list for purchase evaluation.

"We've preached that good network monitoring tools don't have to be complex or expensive, and the experts obviously agree," says J. Gordon Garrett, Interloci's CEO. "The criteria for winning an award include ease of integration and use, functionality and value. Those criteria -- and others used by the judges -- define our product. NetworksAOK is the only appliance that integrates all essential functions required to easily manage networks large and small while enabling network engineers to customize selected functions, if desired."

NetworksAOK -- designed, manufactured and marketed by Interloci Network Management, Greenwich – is an "all-in-one" network management appliance that combines all functions a network manager needs to keep networks up and safe. It is much easier to install, understand and use than other network monitoring software and costs much less than equivalent solutions.

"Customers in government, schools and businesses have told us that they chose

NetworksAOK to manage their networks based primarily on the functionality that our integrated appliance provides, plus the ease of installation and use," Jim Adams, Vice President of Sales, says. They also note the outstanding value and the clear, intuitive dashboard that enables network engineers to see at a glance how their network devices and applications are performing."
